

Hertault condensate: damped Klein-Gordon master equation, $\partial_t^2 \phi + \gamma \partial_t \phi = c^2 \partial_x^2 \phi - m_{\text{eff}}^2 \phi$

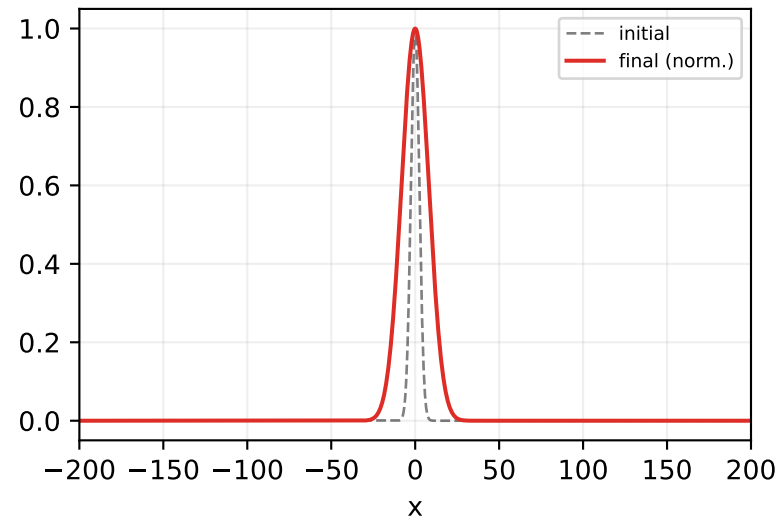

$\rho < \rho_c$ (dark energy, $m_{\text{eff}}^2 = +0.5$)

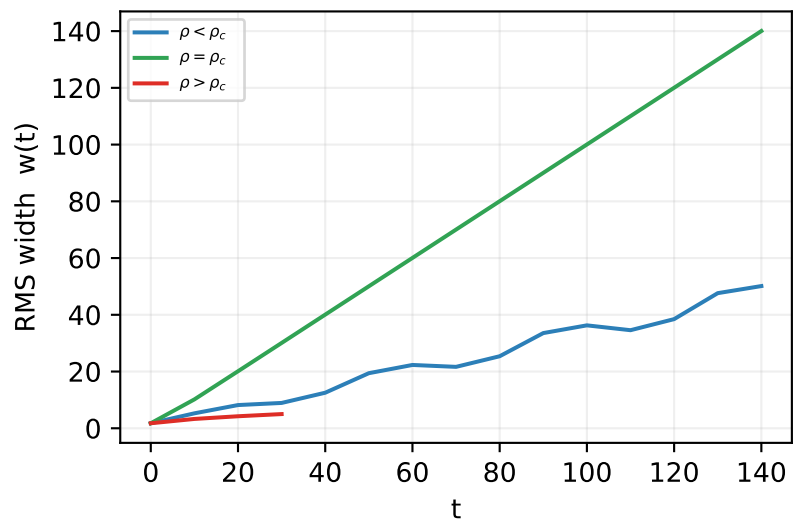

$\rho = \rho_c$ (massless echo, $m_{\text{eff}}^2 = 0$)

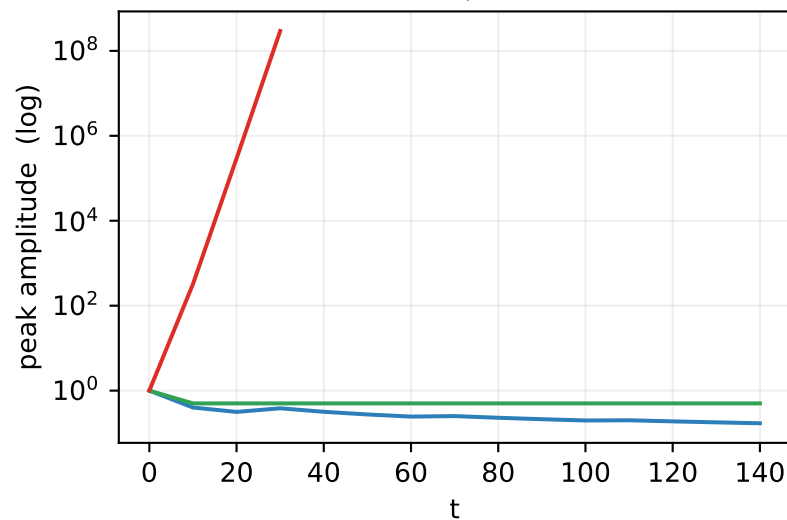

$\rho > \rho_c$ (dark matter, $m_{\text{eff}}^2 = -0.5$)
